CO₂ efficiency

Determined based on the measured CO₂ emissions, taking into account the mass of the vehicle.

The range is measured based on the Worldwide Harmonized Light Vehicle Test Procedure (WLTP). The actual range to be achieved in practice may differ from the WLTP range shown as a result of external circumstances such as driving style, weather conditions and load factor. Homologation process is ongoing. Actual charging speed and charging time may be affected by battery condition, temperature and external weather conditions.
